

REGISTERED ARCHITECT

REQUIREMENTS

Overland is seeking registered architects, who through their educational, professional and life experience demonstrate a passion for improving the built environment and a dedication to serving clients, consultants, and colleagues. Candidates must hold an accredited degree in the field of architecture and be a licensed architect in the United States. LEED Accreditation and proven commitment to sustainability is highly valued. Our ideal candidate will have 3-7 years of experience

At Overland, architects are fully integrated into project teams from conceptual design through construction administration, in roles ranging from designer to project manager. Candidates are expected to exhibit confidence and a strong collaborative attitude. Flexibility, initiative, problem-solving skills, and a positive attitude are important qualities we look for. Our goal as a firm is to unlock the embedded potential in our projects, creating catalysts for transformation for both our firm and the architect.

We expect architects to be highly proficient in design tools necessary to communicate effectively in all project phases, including but not limited to Revit, Sketchup, and the Adobe Suite, as well as hand sketching and physical model building. Candidates must exhibit a strong graphic sensibility and ability to coordinate with internal and external design team members.

Qualified applicants will be evaluated based on their portfolio, work experience, personal and professional references, and interviews.
