

curtains + couture

"The curtain wall, traditionally an icon of modern architecture, takes its name from curtains, but it seems to be misnamed to begin with. It echoes the what structure does and is a direct translation of it, but it has the opportunity to be autonomous and have a defined form and function. The thesis takes the term curtains seriously and advocates for design specificity in a façade system. Instead of following the linear translation from curtains to curtain wall, the thesis finds applied complexities within the territory of the curtain wall. The curtain wall will be redefined through intersected properties of curtains and couture."
